

SOLAR POWER NETWORK™

A Kinder Way to
Power Our Future™

Getting Paid for Going Green

“My roofer pointed out that the solar panels might actually extend the life of my roof by shielding it from UV rays!”

BILL MECHANIC
Checker Industrial Ltd.

A Growing Network of Visionary Businesses

A Homegrown Solution

The Sun is nature's original power plant and it shines its energy down on your rooftop all day long. Solar Power Network Inc. (SPN) is a Canadian, employee-owned company, founded by Canadian engineers, with the goal of bringing Ontario into the renewable future by helping you turn that rooftop into a revenue stream.

The Industry Dream Team

Solar power is a relatively young industry in Canada and you will simply not find another team as experienced as the one at SPN. With decades of experience in rooftop management, engineering, and construction, our engineers understand how to make the absolute most of your rooftop.

Minimal Impact on Rooftops

By installing high-yield low-angle solar panels on unused commercial, institutional and industrial rooftops, SPN generates green energy locally for local consumption. Our engineers have developed a low-profile zero-penetration panel mounting approach which reduces the structural load on the rooftop by 75% compared to other solar companies, allowing for total preservation of both rooftop integrity and building aesthetics.

A New and Consistent Revenue Stream

Under Solar Power Network's straightforward payment programs and lease agreements, you get paid whether the sun shines or not. SPN will never ask you for any financial or in-kind investment. The arrangement we propose is a simple landlord/tenant agreement. We lease your roof and use it to generate the green energy Ontario needs.

Hundreds of Buildings, Millions of Square Feet

Solar Power Network counts over 600 forward-thinking businesses among our partners. SPN is designing, building and operating solar systems on thirty million square feet of underutilized space, helping industrial operators move towards energy independence.

Corporate Social Responsibility for Better than Free

The public is rewarding companies that take firm steps towards corporate social responsibility more than ever before. Embracing rooftop solar is a powerful way to lessen your business' carbon footprint while creating additional jobs within the community. And now is the perfect time to go green. Early adopters of green initiatives like rooftop solar are creating additional revenue for their businesses, while late adopters will inevitably be paying carbon taxes.

Low Risk, High Reward

“SPN demonstrated technical and operational leadership that minimized the risk for Jamieson. Most importantly, this partnership has enabled us to take bold steps towards our corporate goal of minimizing our footprint wherever possible. We are reducing the electrical component of our total carbon emissions by fully 28%.”

ANDY HOLWELL
Jamieson Laboratories Ltd.

A Flexible, Reliable, and Beneficial Agreement

Solar Power Network believes that your rooftop is your most valuable untapped asset. Rooftop solar with SPN is a low-risk, high-reward way to make that asset start producing. Our lease is just seven pages and lays out our terms in simple and straightforward language. We commit to a twenty-year lease, so you can be assured that this partnership will continue to pay and pay. And, if your business could better make use of a lump influx of cash than ongoing payments, we are happy to negotiate full or partial upfront payment.

Every Unshaded Roof Qualifies

Solar Power Network's unique low-angle install results in just five pounds per square foot of additional static load on your rooftop. This, combined with our innovative methods for accommodating different roof types and surfaces, means that, unlike other rooftop solar developers, we can install on virtually any rooftop. If you have at least twenty thousand square feet of unshaded rooftop, on a single building or spread across several on the same site, Solar Power Network is the right choice for you.

Gentle Install, Ongoing Support

Our installation process respects the integrity of your rooftop structure. Thanks to the reduced weight and wind load of our low-angle install method, SPN's mounting brackets and panel systems require absolutely no reinforcements or penetrations of your roof membrane. Our panel systems also ensure that the maintenance of your rooftop space continues to be a simple process and that any warranty you may have on your rooftop is not compromised. Our support team is available seven days a week, and will gladly respond to your needs and make same day arrangements should you need to perform rooftop maintenance.

New Business Opportunities

In addition to the financial advantages of joining our growing network, working with SPN creates valuable ongoing marketing and partnership opportunities for your business. Following installation, the SPN team will provide your company with software which shows real-time analytics of solar panel productivity, green contribution, and weather conditions on your rooftop. This software can be integrated into your own website or placed on dynamic media within your building to tell the world about your environmental commitment.

A Straightforward and Friendly Lease

Solar Power Network maintains a transparent working relationship with all partners, starting at the first meeting and carrying on throughout the lifetime of the lease. We follow a five point process for each solar project:

1. Lease Agreement with Building Owner

- Negotiate lease
- Apply to the Independent Electricity Operator (IESO)

2. Contract with IESO

- Contract offer acceptance
- Financing arranged

3. Connection Approval from Local Hydro Company

- Connection plan developed
- Connection plan approved

4. Engineering, Design, and Approvals

- Structural and electrical design
- Roof assessment and warranty review
- Municipal Building Department review
- Electrical Safety Authority Review

5. Construction and Grid Connection

- "Notice To Proceed" from IESO
- Rooftop installation
- Grid connection
- Post construction review of roof membrane

Isn't It Time Your Roof Got a Job?

Solar Power Network is committed to ensuring a mutually beneficial relationship. We have the resources and multidisciplinary expertise to make the absolute most of your rooftop, and we pass that benefit on to you through our generous and flexible leasing terms. We will work closely with you at every step to ensure that you are comfortable, involved, and informed. Partnering with SPN is gentle on your rooftop, kind to the environment, advantageous to the community, and favorable to your bottom line.
